

The Concept of Spiritual Threat and Modern Approaches to it

Vasila Bakieva Zayniddinova

Senior Lecturer, Department of Humanities, TUIT named after Muhammad al-Khorizmi

ANNOTATION: This article describes the concept of spiritual empathy and provides scientific evidence of how it can be overcome.

KEYWORD: Threat, spiritual threat, process, wealth, morality, youth, spirituality.

The complex processes taking place in today's world require greater attention to the education of young people. As noted by the first president of our country in this regard, "naturally, under the guise of" mass culture" spread the ideas of moral corruption and violence, individualism, egocentrism, if necessary, so as not to cause wealth from the account, how many millennial traditions and values of other peoples, indifference to the spiritual foundations of the way of life, the dangerous threats that are aimed at The factors that negatively affect the morals and morale of our people, especially young people, are mainly the following.

Moral threat-socio-political movement, flow or political power through violence, intimidating ideology that expresses its own interests aggression is a form of ideological violations that are carried out directly by evil forces and various centers in relation to any country, whether inside or outside.

First, according to foreign media reports, now Western countries own three quarters of the world media market of television programs and films. Since their incomprehensible music, songs consisting of meaningless and inhuman actions, interest, eating habits and even clothing are imitating the whole world, without timely protection of young people from the influence of such processes, will harm the culture, spirituality and national characteristics of our people.

Secondly, at the present time, the view that some representatives of Western culture perceive immorality as a culture, and, on the contrary, without neglecting the original spiritual values, as an eskilik sarcophagus, is a great threat to today's development, human life, family well-being and the upbringing of young people, should be an urgent task to pay great attention to the upbringing of Third, today The first is a sharp drop in the birth rate in Western countries. The Western scientist in this judge writes: "The West literally "is dying", the population of almost all Western countries is decreasing to an incredible extent. Since the "Black Plague" disaster, which swept a third of the population of Europe in the fourteenth century, Western civilization has not yet faced such a dangerous threat. It's not for nothing that this disaster will wipe out the entire Western population. Now the mortality rate in most European countries is much higher than at birth.

The second is that the idea, which contradicts religion and decency, as a result of the integration of views, national values, customs and traditions are being absorbed. It is known that religious values, customs and traditions, morality were of great importance in the rise of Western countries to the high

peaks of development. In particular, one of the Western historians writes: "do not look at what period of the historical development of mankind, you will witness that religion e'tiqod serves as the foundation of any great state. Indochina wrote in thoughts: "marriage is a form of slavery. Therefore, the women's movement must be directed against this institution. Negaki said that the hope for the release of women in a society where marriage has not been eradicated is humane." Alas, under the influence of these ideas, million-million Western women are refusing to build a family and give birth to children, unconventional forms of stains appear in all religions of the family.

From 1970 to the present time, the number of people living without marriage has increased from 523 thousand to 6,5 million, that is, by 1000 percent, only one of the four apartments has a full family, the same-sex "marriage" is increasing, the Americans living alone constitute 26 percent of the country's population.

In Britain, however, 34 percent of children are born without a marriage, roughly the same amount of adults suffer from the pain of divorce. Over the next twenty years, less than half of British children can receive parental care. More than half of those imprisoned in the US are corrupt families.

Tomorrow is the day of the land, its development is under the responsibility of young people. At present, the issue of raising the spiritual world of young people, educating them in the spirit of national and universal values is becoming the most urgent task. As our compatriot said: "especially in the present difficult and dangerous period, various attacks on our national and religious values, merciless aspirations aimed at capturing the minds and hearts of our young people, ideological threats are becoming more and more alert and aware of everyone." Threats aimed at destabilizing the spiritual stability of society are called spiritual threats.

Moral threats can derail all facets of the life of society, bring about chaos and disorder in the management of society, divide social forces into opposing groups, create antagonistic contradictions between the social strata, nationalities, religions and religious confessions in the country, completely undermine the social stability of the country.
